COMBINATION WINDOW

Combination windows are one of the most unique styles of windows that you can incorporate in your space. An integration of sliding, casement, and fixed windows; combination windows can be designed as per your need and size requirement. The advantage with combination windows is that your chosen styles can be combined together and built into one robust and attractive frame. Along with offering design flexibility, the combination windows also provide excellent thermal insulation.

Fixed + Openable

Fixed + Sliding

Fixed + Louvers

Openable + Sliding, etc.

SLIDING WINDOW

The sliding uPVC doors comprise of two or more frames that can slide horizontally, to the left or right on tracks. The doors are very smooth to operate since they are slightly raised above the track. This also prevents the dust from settling in the track. Sliding uPVC doors are a perfect fit if you are looking to make your space look well-lit and spacious.

Sliding uPVC windows are perfect for those spaces where you do not want your window to be protruding. Save space by installing this particular type of window. These generally have one or two window sashes that slide horizontally within the frame. They are very easy to operate and are quite versatile. All you need is a gentle push to open the windows. To deliver the best panoramic views, sliding uPVC windows have rollers at the bottom. Give your home a fresh upgrade. These windows are a favourite choice for many as they offer a visually enjoyable effect.

SLIDING DOOR
